ATHARV MISHRA

Mobile Application Developer

Android | Kotlin | Java | Flutter

Noida, India | +91-8755328239 | atharvmishra77@gmail.com

Portfolio: https://atharv-portfolio-ashy.vercel.app

PROFESSIONAL SUMMARY

Software engineer with **5+ years of experience** across **Android and Flutter** application development and automated software testing. Focused on **application architecture**, high-level design (HLD) and low-level design (LLD), using Kotlin, Java, MVVM and Clean Architecture. Delivered POS, fintech and IoT applications with **offline-first storage**, real-time synchronization and automated tests integrated into **CI/CD** pipelines.

TECHNICAL SKILLS

Languages and mobile development: Kotlin, Java, Dart, Android, Flutter, Jetpack, Coroutines, Hilt

Architecture and design: High-Level Design (HLD), Low-Level Design (LLD), Clean Architecture, MVVM, Repository Pattern, use cases, dependency injection

Data and state management: Room, Drift, SQLite, Bloc/Cubit, Riverpod, Provider, offline-first synchronization

APIs and integration: Retrofit, Firebase, Firestore, WebSockets, MQTT, Node.js, payment integration

Testing and delivery: Selenium, functional and regression testing, performance and load testing, continuous integration and delivery (CI/CD), Jenkins, Git, Android Studio, Melos

PROFESSIONAL EXPERIENCE

QueueBuster | Mobile App Developer | Oct 2024 - Present

- Led development of an **Android self-checkout application** for restaurant chains, focusing on kiosk UI/UX, QR/OTP order lookup, voucher and combo redemption, **payment integration** and thermal receipt printing.
- Owned the **high-level architecture** of the Windows billing application and developed its Fine Dine module. Combined **Drift/SQLite** persistence with real-time **WebSocket synchronization** of table, kitchen order ticket and settlement events to support network-independent billing.
- Architected a Flutter slot-booking kiosk using **Clean Architecture**, with component-level design for **Bloc/Cubit** state management and **dependency injection**. Delivered live availability, guest capture, QR tickets and thermal printing in **under a week**.
- Built an Android gate-admission application integrating WebSocket scanner events with a **native Kotlin OPC UA client** (Eclipse Milo) to operate PLC-controlled turnstiles for individual, group and express entry.

Unnati AgriTech | Android App Developer | Feb 2023 - Oct 2024

- Designed scalable **MVVM architecture** for the Ora Finance loan application, integrated **Razorpay E-Mandate** and implemented KYC verification workflows.
- Migrated legacy **Java modules to Kotlin** for U-Store, an application with **100K+ downloads**. Improved **API performance** and modernized local data storage using Room.

Wipro | Software Development Engineer in Test (SDET) | Dec 2021 - Feb 2023

- Built and maintained **Selenium automated test suites** for Blackstone enterprise financial platforms and integrated them into **CI/CD pipelines**.
- Executed functional, regression, **performance and load testing** to support software quality and application stability.

LogicLadder Technologies | Android Intern Trainee | Mar 2021 - Jul 2021

- Gained foundational knowledge of **Android application development**, including basic app structure, UI concepts and development workflows.

SELECTED PROJECTS

Hello NITR: Flutter communication platform using Firestore, Firebase Functions, Hosting and Authentication.

QuickQueue: QR-based restaurant ordering platform with POS, analytics, reporting and payment workflows.

NoNames Social Media: Integrated AWS facial recognition, VoIP calling, encrypted multimedia chat and delivery tracking.
